

Internship or Full-time Job in France on aquaponics

URBAPONIE is a young French company aiming at developing and distributing **aquaponics urban farms**.

We are looking for an additional person to **run our prototype**: a 100m² greenhouse fitted with hydroponic vegetable growing + RAS freshwater aquaculture. The prototype will be **east of Paris** on a University campus and will run for a 18 months period.

Objective of the prototype period is to improve technical solutions, calculate output, optimize choice of production and up-scale results to design larger commercial farms. We will in parallel study the design, perform market studies, define the whole package for future farms.

The person, together with our agro-engineer, will set-up and overview the daily production/trials, and will analyze data. He/She will contribute to the writing of the Farming Manual. You must have experience with **RAS freshwater aquaculture**, and ideally a small experience in aquaponics.

18 months contract starting mid-2011. Alternative 6 months for an **internship** under IMARES supervision.

Dr Agnès Joly

Quality and Distribution Manager,
Relation with Research.
